

# 5 Benefits of Continuous Onboarding

Continuous Onboarding includes live training and live working sessions, supplemented by always-available IriusRisk Academy's computer-based training. Live training covers tenant setup, end-user, and administrator training. Following the completion of the live training, an IriusRisk engineer will be assigned for 2 working sessions to assist with any questions or live threat models. This onboarding tier also includes 40 customized components and 4 custom API integrations. This onboarding package includes continuous access to an IriusRisk engineer for quarterly training and working sessions.

## 1. Live Engineer-Led Training

Customer has full access to live training and workshops to learn the essential functions of IriusRisk, as well as live threat modeling training.

## 2. Just in Time (JIT) Computer-Based Training

Training that's based on their role and at their pace. This helps distributed teams to get up to speed in new concepts and tooling quickly and efficiently.

## 3. Working Sessions

Working sessions are designed to enforce key product concepts with live examples. Customers come with a diagram and leave with a full threat model.

## 4. Custom API Integration

Customers in this track can request 4 custom API integrations to meet their unique requirements.

## 5. Custom Components

Customers in this onboarding track get access to 40 customized components to be consumed in their threat models.
