IriusRisk

Build smarter, not harder: Questionnaire creation without the complexity

A powerful new way to build threat modeling questionnaires.

Previously, building project questionnaires relied on our powerful rules engine—flexible and highly configurable, but not always the fastest path for common use cases or inexperienced users. Now, with the Model Questionnaire Builder, your teams can build questionnaires faster, more easily, and with zero need for deep architectural support. Whether you're streamlining assessments or tailoring inputs to specific use cases, this intuitive feature meets your threat modeling needs with ease.

Key Benefits:

- Cut questionnaire creation time significantly
- Empower more users to build and update questionnaires
- Reduce reliance on architects and rule configurations
- Support more accurate, use case-specific data collection
- Edit and refine questionnaires anytime, all in one place

Ideal For:

Security teams, developers, architects, and product managers who need to shape threat modeling questionnaires to match real-world requirements, quickly and independently.
